### Part Number System In Inches For Compression Springs

We have created an efficient part number system for our springs. Our part number uses the actual dimensions of the spring to provide you with a part number that is meaningful and descriptive. Each part number consists of a series of numbers separated by hyphens, each series indicates a different dimension of the spring. This makes it easy for you to get a full description of the spring you are ordering by just looking at the part number, it can also simplify your search and quickly allow you to verify what material your spring is made of.

### Part Number Breakdown Example

<b>PC030-250-9500-MW-1000-CG-N-IN</b>						
<i>Part Number</i>	<i>Wire Diameter</i>	<i>Total Coils</i>	<i>Free Length</i>	<i>Finish</i>	<i>End Type</i>	<i>Unit of Measure</i>
<i>Compression Spring</i>	<i>Outer Diameter of Spring</i>	<i>Material Type</i>
